Margaret Leber
Senior Software Engineer

What was your first job?

My first job as an adult was running computers that printed personalized junk mail...excuse me... "targeted direct mail advertising." :-)

Where did you work before Rajant?

I've been working with software at about a dozen different enterprises for over the last 40 years. I started by working on IBM's mainframes before moving over to the software and computing services industries. In the 1990s, I transitioned away from mainframe technology into PCs, servers and networking. Most recently before Rajant, I was a Principal Software Engineer for a small cloud software startup.

What attracted you to Rajant?

When I was first approached to join the Rajant Engineering team, I was impressed with the quality and technology in Rajant products. But after my first interview, the biggest draw for me was the quality of the people in the organization and the respect with which they treat each other. And they're uniformly and without exception both the smartest and nicest bunch of people I've ever worked with.

What is a typical day like for you at Rajant?

I help create the management and measurement software our customers use to keep their InstaMesh networks operating reliably and quickly. On a typical day, I create enhancements or fixes for our software and then test them on our internal engineering network. I also write documentation or prepare presentations or videos to explain our work to customers and other Rajant folks.

What is the best advice you have ever heard?

If you want a lifetime career in technology, you can't let your skills stagnate. Always be learning.

Any hobbies or hidden talents?

My favorite pastime is flying our flying club's 1976 model single-engine airplane, a Cessna Cardinal. I've been a part-owner (with 10 other pilots) for over 30 years and have recently been elected Club President. I engineered a significant upgrade that modernized our avionics and better integrated the air traffic control system. After getting my pilot's license, one of my biggest bucket list items is adding an instrument pilot rating allowing me to fly in clouds and in less-than-perfect weather. Completing that has been a challenge, but I believe the end is in sight.
